

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (PREVIOUSLY PRESENTED) An Inhalation therapy device comprising:
 - a nebulising chamber, and
 - an aerosol generator, which is arranged such that it releases an aerosol into the nebulising chamber, and which comprises a nozzle element,
 - said nozzle element comprising at least a first part and a second part, said first part of the nozzle element being made of a more resilient material than said second part of the nozzle element, and said first part of the nozzle element being attached to said second part of the nozzle element.
2. (PREVIOUSLY PRESENTED) An inhalation therapy device according to claim 1, wherein the first part of the nozzle element has a cross-section which tapers further than that of the second part of said nozzle element.
3. (PREVIOUSLY PRESENTED) An inhalation therapy device according to one claim 1, wherein the first part of the nozzle element is made of silicone rubber or a thermoplastic elastomer (TPE).
4. (CURRENTLY AMENDED) An inhalation therapy device according to claim 1, wherein

the first part of the nozzle element is produced together with and the second part of said nozzle element in comprises a two-component method and structure having said first part of the nozzle element is thereby moulded molded on said second part of the nozzle element.

5. (CURRENTLY AMENDED) An inhalation therapy device according to claim 1, wherein the first part of the nozzle element contains the a nozzle outlet.

6. (PREVIOUSLY PRESENTED) An inhalation therapy device according to claim 1, wherein the nozzle has a third part containing the nozzle outlet.

7. (CURRENTLY AMENDED) An inhalation therapy device according to claim 1, wherein the a third part of the nozzle element has a cross-section which tapers further than that of the first part of the nozzle element.

8. (CURRENTLY AMENDED) An inhalation therapy device according to claim 6, wherein the third part of the nozzle element is produced together with and the first part of the nozzle element in the comprise a two-component method molded structure.

9. (PREVIOUSLY PRESENTED) An inhalation therapy device according to claim 6, wherein the third part of the nozzle element is made of a less resilient material than the first part of said nozzle element.

10. (PREVIOUSLY PRESENTED) An inhalation therapy device comprising:

a nebulising chamber, and

an aerosol generator, which is arranged such that it releases an aerosol into the nebulising chamber, and which comprises a nozzle element,

said nozzle element comprising at least a first part, said first part of the nozzle element being made of a more resilient material than a member of the inhalation therapy device on which the nozzle element is moulded or to which the nozzle element is attached.

11. (PREVIOUSLY PRESENTED) An inhalation therapy device according to claim 10, wherein the first part of the nozzle element is made of silicone rubber or a thermoplastic elastomer (TPE).

12. (PREVIOUSLY PRESENTED) An inhalation therapy device according to claim 10, wherein the first part of the nozzle element contains the nozzle outlet.
